BILL VALIDATION

WHAT IS BILL VALIDATION?

Bill validation is a process which uses software to validate the accuracy of your energy bills and energy consumption. At EES we offer a system called Evolve Energy Manager, which monitors and analyses your utilities.

Using Evolve Energy Manager, you can monitor electricity, gas, water, renewable energy and other utilities such as oil and waste.

HOW DOES BILL VALIDATION WORK?

Evolve Energy Manager has the capability to retrieve and input all of energy bills and energy data directly from your supplier.

This is then analysed and validated, with over 125 automated and customisable checks available for cost and consumption analysis.

You can also access and analyse your data usage online using our cloud based portal, increasing the oversight you have over your energy usage.

BENEFITS OF BILL VALIDATION

Visibility

Evolve Energy Manager enables you to take an active role in monitoring your energy spend and consumption, without trawling through bills.

Cost Savings

Any billing errors are flagged and only valid bills are suggested to be paid, ensuring your business only pays for what it has used.

Efficiency

Bill checking can be resource intensive. Evolve Energy Manager reduces the pressure on staff time, automating invoice processing.

Insight

Evolve helps you to better understand your energy consumption, through advanced data analytics and custom metrics.
